## Choosing the Right Wallet

**Use these parameters to find the best wallets**

- The wallet must have funds to trade with.
- Trading history not more than 50 days.
- ROI above 25%.
- Win Rate At least 68%.
- Avg. Investment: Less than 2 SOL
- Total Trades: Over 50.
- Buying Pattern: Less than 2 buys per token and more than 2 buys per day.

## Choosing the Right Wallet

**Next, analyze the wallet's trades using its attached Excel sheet:**

- Gas Fees: Buy/Sell shouldn’t exceed 0.002 each.
- Loss Pattern: No more than 5 consecutive losses, and losses should stay below 25%. If there are a few larger losses, check if the wallet recovered quickly with profits afterward.
- Trade Duration: Trades should last no longer than 1 hour.

## Testing the Wallet

**Test the Wallet Thoroughly**

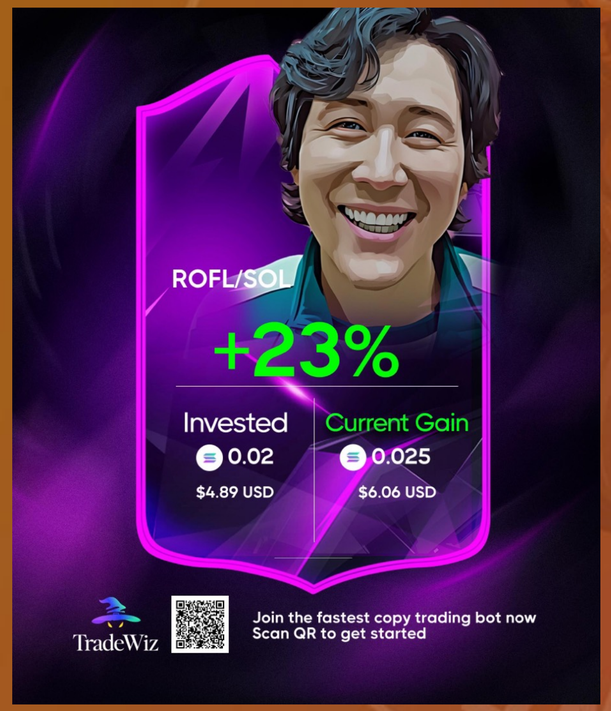

- Test your new wallets with small trades.
- Begin with 0.01 SOL and slightly higher gas fees (e.g., if the wallet uses 0.002 SOL, set yours at 0.003 SOL).
- Copy 2-3 trades. If any buy or sell fails (due to slippage, MEV, or gas fees), move on to the next wallet.
- Compare Results: If your profit/loss differs by more than 20% compared to the wallet you are copying, drop it and find another.

## Trading and Scaling

**Time to Trade for Real**

- If the wallet passes the testing phase, gradually scale up:
- Begin with 0.1 SOL while closely monitoring entry and exit points.
- If the wallet consistently makes good exits, trust it and slowly increase your trades to a maximum of 0.3 SOL.
- If the wallet often sells too early or too late (e.g., selling at less than 50% profit when the token reaches more), set your own take-profit rule: sell 30% of your investment at 50% profit and hold the rest.
- If the wallet has 3 consecutive losses greater than 25%, stop copying and move on.
- SL is not in use for these wallets but that is your personal choice
